

## 2026 Leapfrog Hospital Survey Overview of Content for Hospitals and Stakeholders

The Leapfrog Hospital Survey is a free, annual survey that assesses hospital performance on national measures of safety, quality, and efficiency of both inpatient and outpatient care. These measures are of specific interest to health care purchasers and consumers, and cover a broad range of hospital processes, outcomes, and structures in many clinical areas such as surgical care, maternity care, and pediatric care.

Several of the measures included on Leapfrog's annual survey are aligned with other national agencies and organizations such as The Joint Commission (TJC), the Centers for Disease Control and Prevention (CDC), and the Centers for Medicare and Medicaid Services (CMS). The table below includes information about which measures are used in one or more of the CMS programs including the Inpatient Quality Reporting Program (IQR), Value-Based Purchasing Program (VBP), Hospital-Acquired Condition (HAC) Reduction Program, and Hospital Outpatient Quality Reporting Program (OQR). In addition, the table includes information about which measures are included in the [Leapfrog Hospital Safety Grade](#).

The Leapfrog Hospital Survey provides hospitals with the opportunity to benchmark their performance on these national measures against other hospitals in their state and across the nation. Hospitals can also benchmark their performance against ambulatory surgery centers on a national set of measures focused on outpatient procedures.

Survey Results from hospitals and ASCs are publicly reported at <https://ratings.leapfroggroup.org/>. Find more information about the Leapfrog Hospital Survey at [www.leapfroggroup.org/hospital](http://www.leapfroggroup.org/hospital). Detailed scoring information is provided in the Scoring Algorithms at <https://www.leapfroggroup.org/survey-materials/scoring-and-results>.

**All the measures listed below are applicable to general, acute care hospitals.**

✓ Check marks indicate measures that are applicable to either freestanding Pediatric Facilities or Critical Access Hospitals.

\* An asterisk indicates that the measure is only applicable if the hospital performs the procedure or treats the conditions.
